

## **MINDFULNESS RESOURCES**

### **What is Mindfulness?**

Simply defined, mindfulness is about paying attention (to physical sensations, emotions and thoughts), on purpose, without judgement. The goal is to acknowledge and accept reality in the present moment.

Supported by an increasing amount of scientific evidence, mindfulness is effective for wide range of conditions, including depression, anxiety, substance use and chronic pain.

Anyone can practice mindfulness, but there are also targeted programs including:

**Mindfulness-Based Stress Reduction (MBSR):** This group program, originally developed by Dr. Jon Kabot-Zinn helps individuals manage stress from chronic physical or psychological conditions. The group is typically offered once a week (2.5 hours) for 8 weeks with one silent meditation retreat on a Saturday. It is an expectation that participants continue to practice mindfulness daily for the duration of the group.

**Mindfulness-Based Cognitive Therapy (MBCT):** This group program combines principles of CBT and mindfulness and is particularly helpful for preventing a relapse of depression and treating mood disorders. The group is typically offered once a week (2.5 hours) for 8 weeks with one silent meditation retreat on a Saturday. It is an expectation that participants continue to practice mindfulness daily for the duration of the group.

**Mindfulness-Based Relapse Prevention (MBRP):** This group program helps individuals avoid relapse to addictive behaviors, specifically substance use and gambling.

### **Community-Based Programs**

#### **The Centre for Mindfulness Studies**

180 Sudbury Street, Unit C2 Toronto ON; 647-524-6216

[www.mindfulnessstudies.com](http://www.mindfulnessstudies.com)
